

# National Architecture for Digital Services in Finland

## Improving the entire Finnish digital service scene:

- Higher quality, more reliability, more open public sector services available in one place, produced cost-efficiently
- Common information repositories and systems for the entire public sector
- New kinds of possibilities to utilize public sector data and services, new business opportunities for the private sector

## Suomi.fi Services

The Suomi.fi service entity simplifies and unifies the provision of digital services, whether they relate to authentication, making transactions on behalf of another, data system integration, communications or, for example, service visibility on a map. Service providers can easily participate in the digitalization of Finland by taking into use Suomi.fi Services of their choice.

For public and private sectors		For public sector
<p><b>Suomi.fi Finnish Service Catalogue</b></p> <p>National data resource for storing and provisioning service information for digital services.</p>	<p><b>Suomi.fi Data Exchange Layer</b></p> <p>Standardized channel for safe data transfer between organizations.</p>	<p><b>Suomi.fi e-Identification</b></p> <p>Strong authentication and single sign-on for digital service end-users with bank id and mobile certificate.</p>
<p><b>Suomi.fi e-Authorizations</b></p> <p>Users can authorize others to make electronic transactions on their behalf. Service providers can check these authorizations online.</p>	<p><b>Suomi.fi Web Service</b></p> <p>End-users' personal data and messages, access to services, guidance and information from Finnish Service Catalogue and other registers.</p>	<p><b>Suomi.fi Messages</b></p> <p>Digital communication between authorities and end-users. Easy-to-use desktop and mobile interfaces.</p>
